

## Results from Chuckanut Bay/Edgemoor Workshop Survey

- 27 participants (more were observed in the room so some may not have signed in)
- 13 evaluations completed
- Five requests for additional packets to give to neighbors
- Ratings for overall quality of workshop:
  - 8 excellent, 2 good, and 1 average
- Almost everyone said they'd recommend it to friends and neighbors--(one said "maybe")
- Among the important items learned during the workshop, participants noted the following:
  - shore forms and the importance of shelf-marine life and habitats
  - amount of interest and general knowledge of Edgemoor population
  - meeting people who work for orgs/agencies involved in protecting the environment
  - geology and wildlife
- In response to question re: what might you do differently as a result of the workshop? Participants responded:
  - Reduce lawn watering in summer
  - Plant native plants
  - Limit impervious surfaces
  - Keep up with septic system care
- Suggestions for how to improve workshop
  - Allow for interaction among participants
  - More timely notice
  - Give the planning department more time
- Other comments:
  - Every speaker gave me good information!
  - We are new residents and want to be good stewards.
  - Great seminar!

One of the workshop participants decided to use bioengineering rather than a planned bulkhead, partially as a result of the workshop (and partially as a result of an agency staff site visit).
